

Sales Performance & Business Insights Report – Vrinda Store (2022)

Business Problem

Vrinda Store operates across multiple online sales channels and regions but lacked a centralized view of its business performance. The management wanted to answer key questions such as:

- Which sales channels generate the highest revenue?
- Which states contribute the most to overall sales?
- Which customer segments (age and gender) are driving purchases?
- How do monthly sales and order volumes change throughout the year?
- What percentage of orders are delivered successfully versus cancelled, returned, or refunded?
- Where should marketing and operational efforts be focused to improve business performance?

Without a dashboard, answering these questions required manually reviewing large Excel datasets, making decision-making slow and inefficient.

Solution Implemented

I developed an interactive Power BI dashboard that transformed raw sales data into meaningful business insights.

The dashboard enables stakeholders to:

- Monitor monthly sales and order trends.
- Track order fulfillment performance.
- Identify the highest-performing sales channels.
- Analyze customer purchasing behavior by age group and gender.
- Compare sales across different states.
- Filter data dynamically by month, sales channel, product category, and customer age group.

This provides management with a single source of truth for making faster, data-driven decisions.

Key Findings

1. Excellent Order Fulfillment

- 88% of all orders were successfully delivered.
 - Returns, cancellations, and refunds remained low, indicating efficient logistics.
-

2. Amazon is the Leading Sales Channel

- Amazon generated the highest share of orders.
- Ajo and Flipkart followed as the next strongest channels.

Business Action

- Continue investing in Amazon while expanding sales through other marketplaces to reduce dependency.
-

3. Maharashtra and Karnataka Drive Revenue

These states contributed the highest sales among all regions.

Business Action

- Increase marketing efforts and inventory availability in high-performing states.
-

4. Adults are the Primary Customer Segment

Adult customers generated the highest number of purchases.

Business Action

- Focus promotions and product recommendations on this demographic while creating campaigns for teenagers and senior customers.
-

5. Stable Sales Throughout the Year

Sales remained relatively consistent, with a noticeable peak around August.

Business Action

- Prepare inventory and promotional campaigns ahead of seasonal demand.
-

6. Male Customers Purchased More

Across all age groups, men placed more orders than women.

Business Action

- Develop targeted marketing campaigns and product offerings to increase engagement among female customers.

Business Value Delivered

By building this dashboard:

- Reduced manual reporting effort.
- Enabled real-time business performance monitoring.
- Helped identify top-performing states and sales channels.
- Improved visibility into customer purchasing behavior.
- Supported data-driven decision-making for marketing, sales, and operations.
